

Willians PATIÑO

Caracas, Venezuela | +58 424 2486169 | ppwillians@yahoo.com | <https://linkedin.com/in/ppwillians>

PROFESSIONAL PROFILE

Systems Administrator and IT Infrastructure Specialist with over 11 years of experience in enterprise and government sectors. Expert in data center operations supervision (on-site and remote), requirements analysis, server deployment and maintenance, migration management, and security standards application to ensure scalable and highly available systems. Detail-oriented and goal-driven professional with a strong focus on process optimization and operational cost reduction. Available for remote and hybrid roles where business continuity is the top priority.

TECHNICAL COMPETENCIES

Infrastructure & Operations

- **Operating Systems:** Linux (RHEL, Ubuntu, Fedora), FreeBSD, and Windows Server.
- **Networks & Security:** pfSense, VPN (IPsec/SSL), IDS/IPS, Firewalling, and Hardening.
- **Virtualization:** VMware ESXi, Proxmox, KVM, Hyper-V, and Nutanix.
- **Databases:** MariaDB, PostgreSQL, and LDAP.
- **Email:** Zimbra (administration, migrations, and backup).
- **Monitoring:** Zabbix, Prometheus, and Grafana.
- **Scripting:** Bash and Python.
- **Computer Hardware:** Servers, Blades, Peripherals, spares, assembly and troubleshooting.

Cloud Native

- **Containers & Orchestration:** Docker, Kubernetes (k3s), Podman, and Helm.
- **Automation:** Ansible, Terraform, and GitOps.
- **CI/CD:** Git, GitHub/GitLab CI, and FluxCD.
- **Cloud:** Hybrid infrastructure and Cloud migrations (backup/DR).
- **Active Adoption:** HomeLab Kubernetes.

PROFESSIONAL EXPERIENCE

Infrastructure Support | Linux Support | Freelancer

datenmaniak — Technology Consulting | Caracas, Venezuela | March 2021 – Present

Consulting for SMEs: Data center, cybersecurity, networks, and systems migration.

Monitoring and Support: remote or on-site assistance. Systems & Web Hosting support.

IT Manager (fixed-term contract)

Grupo Jules | Caracas, Venezuela | November 2019 – September 2020

- **Led infrastructure modernization:** achieving 40% telecommunications optimization and migrated critical systems to Cloud providers as contingency backup.
- **Implemented container-based development environments:** (Docker) reducing deployment times and facilitating continuous integration for the development team.
- **Deployed perimeter security:** DHCP, DNS, network segmentation, VPN improving corporate communications performance by ~40% and remote access for administrative staff and external consultants.
- **Data recovery and preservation:** Recovered 8+ years of administrative and commercial data, migrating to a NAS solution with authentication, ensuring security and business continuity.

Network and Systems Engineer (fixed-term contract)

Net7 PERU S.A.C. | Lima, Peru | November 2018 – February 2019 (Migration project/)

- **Corporate email deployment and migration:** 600+ mailboxes to Zimbra/Red Hat Enterprise Linux ensuring zero data loss and zero service downtime.
- **Migration of traditional virtualization systems:** to hybrid environments on Nutanix, improving infrastructure scalability and redundancy.
- **Task automation:** Operational tasks on Linux servers via Bash and Python scripts, reducing recurring administration time.
- **Server deployment and hardening:** Migration from CentOS to RHEL as base system replacement.

Freelance Systems Consultant

N-Vision GmbH, Neuhauf, Onnens Systems | Switzerland | June 2015 – September 2018

- **Infrastructure optimization consulting in Europe:** achieving over 50% performance improvements in corporate networks and services by implementing a new network design and firewalling.
- **Multi-role Linux server deployment:** (DNS, DHCP, Web, Zimbra, Asterisk/VoIP) for environments up to 50 concurrent users under private contract.
- **pfSense firewall deployment:** applying perimeter security policies, site-to-site VPNs, and IDS/IPS filtering policies.
- **Vulnerability audits:** Linux system hardening following enterprise-required standards.

Systems Administrator | Lead Zimbra Administrator | Programmer

Ministry of Foreign Affairs | Caracas, Venezuela | August 2003 – January 2015

- **Zimbra platform administration:** 5,000+ active accounts, 128 diplomatic missions abroad, version migrations, backup, and disaster recovery.
- **Centralized authentication:** Implemented and operated corporate LDAP authentication infrastructure for email, services, and applications with multiple replicas (5,000+ users).
- **Perimeter security:** IDS/IPS implementation reducing SPAM incidents from 80% to 5% on critical email platforms.
- **Systems administration:** Joint management of 50+ Linux servers, Blades, SAN, NAS, virtualization with essential services ensuring 24/7 communications and operations.
- **International technical delegate:** Participated in infrastructure deployment for biometric passport systems in 6 countries, ensuring compliance with security standards, high availability, and consular efficiency.
- **Automation:** Developed from scratch Bash and Perl tools for task automation between servers, high availability, replication, and backups.

EDUCATION

Higher University Technician (TSU) in Information Technologies

"Juan Pablo Pérez Alfonzo" University Institute of Technology, 1996

Bachelor's in Business Administration, Computer Science major

"Simón Rodríguez" National Experimental University, 2009

LANGUAGES

- **Spanish:** Native
- **English:** B1 (Intermediate)
- **French:** B1 (Intermediate)

CERTIFICATIONS

- CCNA (Cisco Certified Network Associate)

COMPLEMENTARY TRAINING

- RHCSA (EX200) Red Hat Enterprise Linux Certification — In preparation
- Certified Kubernetes Administrator (CKA) — In preparation
- AWS Cloud Practitioner — In preparation
- Docker Mastery
- Python Bootcamp from Zero to Hero
- SQL Bootcamp Zero to Hero
- Advanced Juniper Network Firewall & VPN Implementation
- VMWare Virtual Infrastructure vSphere: Install, Configure, and Management.

KEY ACHIEVEMENTS

- **Corporate Email Repatriation and Scalability:** Recovered and centralized 150 email accounts operating externally at an ISP, leading subsequent migration to Zimbra platform and scaling infrastructure from 150 to 5,000+ active accounts — including 128 diplomatic missions abroad. Assumed full service administration under high availability and disaster recovery schemes.
- **Cybersecurity and Threat Mitigation:** Implemented a bastion IDS/IPS system for email traffic convergence, reducing SPAM incidents from 80% to 5% and hardening the institutional network.
- **Telecommunications Optimization:** Designed and implemented perimeter security policies that improved ISP bandwidth performance by 40%, ensuring efficiency and continuity of corporate communications.
- **Data Management and Cost Efficiency:** Recovered and centralized 8 years of corporate information migrating to NAS infrastructure with secure authentication, drastically reducing operational costs through open-source solution adoption.
- **High Availability Architecture:** Deployed centralized LDAP authentication infrastructure for 5,000 users with multiple replicas, ensuring operational continuity and uninterrupted access to critical institutional services.
